Design: AART Designers

FOCUS-LIGHTING

Space

## Innovative design

AART Designers and Focus Lighting have created Space, a sophisticated, large-scale luminaire with outstanding lighting properties. Circular shades and diffusers are designed to expand the light from a compact LED to powerful and comfortable illumination - creating new human spaces.

## Characteristics:

- + Comfortable, graduated light (direct/indirect/diffused)
- + Non-visible LED
- + Excellent light distribution with high uniformity
- + Energy efficient
- + Voluminous and wide
- + Fully enlightened with symmetry and asymmetry
- + Elegant on high and low poles
- + Elegant integration of smart-city sensors
- + Dark-sky friendly lighting
- + Corrosion resistant design

Space symmetrical

Symmetrical light distribution  
From above

## Symmetrical

- + Design and light in perfect harmony
- + Non-directional
- + Human comfort due to enlightened surroundings
- + Excellent light distribution with unique uniformity

Space asymmetrical

Asymmetrical light distribution  
From above

## Asymmetrical

Asymmetrical light distributions may be the preferred choice for specific applications. Space with asymmetrical distribution is outstanding due to the fact that the visual impression of a round, fully enlightened luminaire remains the same. Some of the advantages of Space asymmetrical are:

- + Energy savings - up to 28 per cent
- + Longer distance between poles - up to 24 per cent
- + High uniformity

The type IV asymmetry is the right solution in most applications. In case of specific requirements to pole distance and uniformity, type II asymmetry could be advantageous.

## Fully enlightened luminaire

### **Circular form remains the same**

The large luminaire is fully enlightened - both with symmetrical and asymmetrical light distribution. The visual design of the luminaire is kept with and without the light turned on. And in any case, the LED is not visible.

Smart City  
for remote communication

Smart City Zhaga sockets  
for movement sensor

## Future proof

### **Modular design**

Like any other Focus product, Space is modularly built, meaning that by changing just one module you can keep the luminaire running and updated. New technology can be implemented in existing Space luminaires by a few simple adjustments.

### **Smart City**

Space is designed for elegant integration of sockets for smart-city solutions. The Zhaga sockets can be equipped with the preferred control and communication units.
